

## Useful prompt

Before creating the data scraper, it is helpful to understand that you must organize the data sets, you should use a prompt like this and have the A.I. reorganize the data set, by making the rows and columns consistent, when it comes to FEC data and Executive contributions data.

using file which is named "2007-2008 Executive Names" make Columns of: Date of Contributor's Contribution, Name of Contributor, name of Contributors Employer, Occupation of Contributor at Employer, Transaction Amount from Contributor, City of Contributors Residence, State of Contributors Residence.... Using a file which is named "2007-2008 Executive Names" make rows of: Contributors names in alphabetical order.
